

## **Self Standing Mask drying or bracelet holding rack**

- 1. Sand any rough edges using the sandpaper.**
- 2. Set the board on a flat surface like a table.**
- 3. Gently twist and push the thinner dowel through the board.**
- 4. Feel underneath to make sure the end of the dowel and the board are flush (at the same level).**
- 5. Gently twist the larger dowel onto the thinner dowel until it too is flush with the top of the thinner dowel.**

**If your rack is slipping, you can use a small amount of glue to connect any of the pieces.**
